SEPARATES DNA LIKE A DREAM

DNASTAR PULSE™

The new technology of FIELD INVERSION GEL ELECTROPHORESIS (F.I.G.E.) achieves excellent separation of large DNA molecules using a simple one dimensional electric field that is periodically inverted. DNA fragments as large as 1,000,000 base pairs that are unresolvable by conventional electrophoresis can be separated with DNASTAR PULSE™. Of equal importance, you see significantly better resolution with DNA fragments in the range of 5 to 75 Kb. This enhanced visibility and clarity of bands means more accurate measurements and better results with fewer experiments.

This technique was developed by Carle, Frank and Olson and many new applications are just beginning to be explored. DNASTAR PULSE™ now makes it possible for your laboratory to use this technology without the need for an electronics engineer, a programmer, and many hours of development time. The DNASTAR product is designed to drive electrophoresis experiments as specified by the user. The unit includes a small computer with software for running four independent gel apparatus, a device driver to interface computer and switch module(s), and up to four solid state switch modules.

NEW
JOURNAL

CALL FOR PAPERS

Bimonthly from January 1988

BioFACTORS

International research journal
published on behalf of the
International Union of Biochemistry (IUB)

Editor-in-Chief

T C Stadtman,

NIH, National Heart, Lung and Blood Institute, Bethesda MD, USA
Address for correspondence: 16907 Redland Rd, Derwood, MD 20855, USA
Tel (301) 496 3002

Editorial board includes:

R H Abeles, *Waltham MA, USA*
B M Babior, *La Jolla CA, USA*
P Boon Chock, *Bethesda MD, USA*
L Ernster, *Stockholm, Sweden*
H F DeLuca, *Madison WI, USA*
T F Deuel, *St Louis MO, USA*
H J Evans, *Corvallis OR, USA*
S Fukui, *Kyoto, Japan*
O Hayaishi, *Kyoto, Japan*
H G Hers, *Brussels, Belgium*
H-F Kung, *Frederick MD, USA*
E Miles, *Bethesda MD, USA*
S Nishimura, *Tokyo, Japan*

J C Rabinowitz, *Berkeley CA, USA*
S W Ragsdale, *Cleveland OH, USA*
K V Rajagopalan, *Durham NC, USA*
L J Reed, *Austin TX, USA*
J Retey, *Karlsruhe, FRG*
P Senior, *Nottingham, UK*
E E Snell, *Austin TX, USA*
J W Suttie, *Madison WI, USA*
R L Switzer, *Urbana IL, USA*
B L Vallee, *Boston MA, USA*
G Vogels, *Nijmegen, The Netherlands*
S Wakil, *Houston TX, USA*
H G Wood, *Cleveland OH, USA*

General aims and scope

BioFactors is a new international journal aimed at identifying and increasing our understanding of the precise biochemical effects and roles of the large number of trace substances that are required by living organisms. These include vitamins and trace elements, as well as growth factors and regulatory substances made by cells themselves. The elucidation, in a particular organism or cell line, of the roles of substances active in trace quantities, is frequently applicable directly to many other forms of life. In keeping with this unified view of biochemistry, *BioFactors* will accept articles dealing with the identification of new substances and the elucidation of their functions at the basic biochemical level, as well as those revealing novel functions of trace substances already known. In launching and supporting this journal, the IUB recognises the importance of this area of research to such worldwide concerns as the improvement, through better nutrition, of the health and quality of life of the human population.

Call for papers

The editor-in-chief welcomes full papers and short communications describing new and unusual roles of substances and deserving of accelerated publication. Only contributions of outstanding scientific quality will be accepted for publication. State-of-the-art mini-reviews are also encouraged, to provide coverage of areas of general interest, but suggestions for topics should be sent to the editor-in-chief before submitting finished reviews.

Subscription details

Volume 1 (1988) 6 issues:
Libraries etc US\$165/£90
Reduced US\$ 80/£45

The reduced subscription rate is available for individuals who declare in writing that the journal copies are for their own use only and will not be donated to a library, and who either have local access to the journal subscribed at the full rate, or who can show themselves to be members of an IUB-affiliated society.

- ☐ Invoice me for a 1988 subscription to *BioFactors*
at ☐ full rate, ☐ reduced rate
☐ Rush me full instructions to authors
☐ Send me a free sample copy of the first issue

This book gives diagnostic and research workers a complete guide to using the techniques of molecular biology for identifying genetic diseases in patients: it details the necessary methodologies from established and straightforward Southern blotting procedures to a unique account of the latest developments of pulsed-field gel electrophoresis. Molecular biology has brought many advances in clinical fields – in cancer research and identifying the AIDS virus, for example. Now the techniques in this book will assist in analysing specific mutations in patients and in isolating new markers for human genetic disease.

Contents

Fetal DNA analysis *J M Old* • A short guide to linkage analysis *J Ott* • The use of synthetic oligonucleotides as specific hybridization probes in the diagnosis of genetic disorders *S L Thein and R B Wallace* • Alternative methods of gene diagnosis *J L Woodhead, R Fallon, H Figueiredo, J Langdale and A D B Malcolm* • Fine mapping of genes, the characterization of the transcriptional unit *M Antoniou, E deBoer and F Grosveld* • *In situ* hybridization *V J Buckle and I W Craig* • Human chromosome analysis by flow cytometry *B D Young* • Restriction analysis of chromosomal DNA in a size range up to two million base pairs by pulsed-field gradient electrophoresis *G J B van Ommen and J M H Verkerk*

Using this book biochemists can determine how spectrophotometry can contribute to laboratory analyses – what is required in the experimental set up and how the information obtainable should be optimized. Researchers and clinicians will find the detailed protocols and thorough introduction to the use of fluorimeters and spectrophotometers invaluable, particularly if they are using them for the first time or with only a rudimentary knowledge. Technicians carrying out routine analyses will also benefit from such a laboratory handbook.

Contents

An introduction to spectrophotometry and
fluorescence spectrometry *C L Bashford*

- Spectra *R K Poole and C L Bashford*
- Spectrophotometric assays *D A Harris*
- Measurement of ligand binding to proteins
C R Bagshaw and D A Harris
- Spectrophotometry and fluorimetry of cellular
compartments *C L Bashford*
- Stopped-flow
spectrophotometric techniques *J F Eccleston*
- The determination of photochemical action
spectra *D Lloyd and R I Scott*
